

Employee Management System - Requirements Document

1. Project Overview

The Employee Management System (EMS) is a centralized platform designed to manage employee information efficiently within an organization. It provides functionality for HR/admin to add, update, and delete employee data, while enabling employees to view and manage their profiles. The system also handles departments, roles, attendance, and performance tracking.

2. Objectives

- Maintain accurate employee records
- Streamline HR processes (onboarding, offboarding, promotions)
- Track attendance, leaves, and performance
- Generate reports for analysis and compliance

3. Scope

This EMS will include:

- Employee data management
- Department and role allocation
- Attendance and leave tracking
- Performance and appraisal tracking
- Admin and employee portals with appropriate access control

4. Stakeholders

- Admin (HR / Management): Full access to all modules
- Employee: Limited access to personal data and related modules
- IT Support: For system maintenance

5. System Features & Functional Requirements

5.1 User Authentication & Authorization:

- Login/Logout functionality

Employee Management System - Requirements Document

- Role-based access (Admin, Employee)

5.2 Employee Management:

- Add/Edit/Delete employee details
- Assign department, role, manager
- View employee directory

5.3 Department & Role Management:

- Create/Edit/Delete departments
- Assign roles to users
- Map reporting hierarchy

5.4 Attendance & Leave Management:

- Mark daily attendance (in-time/out-time)
- Apply for leaves
- Approve/reject leaves (admin)

5.5 Performance & Appraisal:

- Record employee performance reviews
- Assign goals/targets
- View appraisal history

5.6 Notifications & Reminders:

- Leave approval alerts
- Birthday/work anniversary reminders
- System announcements

5.7 Reports & Analytics:

- Attendance reports
- Department-wise employee reports

Employee Management System - Requirements Document

- Performance summaries

6. Non-Functional Requirements

- Security: Secure login, encrypted sensitive data
- Scalability: Support for growing number of employees
- Availability: 99.9% uptime
- Usability: Intuitive UI with responsive design
- Performance: Fast CRUD operations (<1s response time)

7. Technology Stack (Suggested)

- Frontend: React.js / Angular
- Backend: Node.js / Django / Flask
- Database: PostgreSQL / MySQL
- Authentication: JWT / OAuth 2.0
- Hosting: AWS / Azure / On-premise

8. Assumptions

- All employees have unique employee IDs
- Admin will onboard initial data
- Internet access is available to all users

9. Constraints

- System should comply with local labor laws (data privacy, etc.)
- Must support export to CSV/PDF for reports

10. Future Enhancements (Optional)

- Biometric integration for attendance
- Payroll integration

Employee Management System - Requirements Document

- Mobile app support
- Employee self-service chat support
